#### Election/Restrictions

Please note that applicant's remarks filed on May 17, 2004 set forth that claims 56 and 65 were canceled. However, these claims were not canceled since they remain listed in the claims section.

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 50, 51, 57, and 58 are rejected under 35 U.S.C. 102(e) as being anticipated by Booth et al (US 5,653,690).

Booth discloses a balloon catheter (figs. 12-13) having a balloon with first portions (between spikes 72), and second portions (at 72). The second portion includes a higher friction section that have a first and second radius before and after inflation, and the first portion has third and fourth radius before and after inflation. The fourth radius is less than the second radius when the balloon is inflated.

3. Claims 50, 51, 57-60, and 66 are rejected under 35 U.S.C. 102(b) as being anticipated by Vigil et al (US 5,336,234).

Art Unit: 3763

Vigil discloses a balloon catheter (figs. 2-3) having a balloon with first portions (between blades), and second portions (at 16,44). The second portion includes a higher friction section that have a first and second radius before and after inflation, and the first portion has third and fourth radius before and after inflation. The fourth radius is less than the second radius when the balloon is inflated.

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 52, and 61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vigil et al in view of Abele et al (US 5,693,014).

Vigil discloses the invention substantially as claimed. However, Vigil fails to disclose the second portion being at least partially coated with a friction-enhancing coating.

Abele teaches that it is known to make catheters balloon with different coefficient of frictions, wherein one section is coated to improve the anchoring within the vessel. Given the teachings, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vigil's catheter balloon by including Abele's friction coating to the balloon higher friction section in order to improve the friction of the balloon.

Application/Control Number: 09/759,431

Art Unit: 3763

6. Claim 52 is rejected under 35 U.S.C. 103(a) as being unpatentable over Booth et al in view of Abele et al (US 5,693,014).

Booth discloses the invention substantially as claimed. However, Booth fails to disclose the second portion being at least partially coated with a friction-enhancing coating.

Abele teaches that it is known to make catheters balloon with different coefficient of frictions, wherein one section is coated to improve the anchoring within the vessel. Given the teachings, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Booth's catheter balloon by including Abele's friction coating to the balloon higher friction section in order to improve the friction of the balloon.

## Response to Arguments

7. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cris L. Rodriguez whose telephone number is (703) 308-2194. The examiner can normally be reached on 7:30 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on (703) 308-3552. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
